User-centric Frontend Developer with a talent for creating clean, minimalist interfaces enhanced with subtle animations. With a year of experience using React, I have a proven track record of delivering key features, such as a multi-language system for a business website. My interest extends to the full-stack, where I've enjoyed building complex logic for features like role-based access control ('admin'/'user').

PROJECTS

Ismir Etiket (Clothing Branding Multilingual Business Website)   **October 2024**
Front End
- Developed a website to expand a clothing branding business to international markets.
- Engineered the core multi-language functionality using i18next, allowing the site to seamlessly switch between languages to cater to foreign customers.
- Created a clean, modern UI with Tailwind CSS focused on presenting product information clearly and effectively.

Mega Coffee Order App (Online Coffee Ordering Platform)   **March 2025**
Front End
- Built a web application to automate the coffee ordering process for a seamless customer experience.
- Implemented a key feature: a real-time admin dashboard where new orders instantly appear accompanied by an audio alert, demonstrating skills in client-server communication.
- Developed complex logic for order customization, which honed my abilities in state management and API integration.

Cool-Pic (for sharing and discovering pictures)   **May 2025**
MERN
- Architected and built my first full-stack photo sharing application, handling everything from the database to the user interface.
- Engineered the image upload feature by integrating the Cloudinary API, allowing users to seamlessly upload files to cloud storage.
- Implemented a secure user authentication and authorization system from scratch using JSON Web Tokens (JWT).

Movie Seats (Online Cinema Seat Booking Platform)   **June 2025**
MERN
- Developed a full-stack cinema booking platform featuring a powerful Content Management System (CMS) for administrators.
- Designed and implemented a complex backend API allowing admins to manage movie sessions, dynamically set ticket prices based on variables like time and location, and control seat availability.
